Current position Researcher in Spatial Ecology with a fixed-term employment contract full-time for the three-year at the Institute for Agriculture and Forestry Systems in the Mediterranean (ISAFoM) - National Research Council

Research interest I am an ecologist interested in exploring the macro processes that shape the global species' distribution by using GIS tools, ecological modelling, and remote sensing. My research focuses on understanding how the biotic and abiotic components of the Earth system vary across space and time, their interactions, and predicting shifts in the distribution of biodiversity due to natural and anthropogenic events in marine ecosystems. My professional activities encompass two main goals. On the one hand, I aim to provide a better understanding of global change biology, biological invasions and macroecology, applying my findings to spatial planning and conservation biology. On the other hand, I engage in scientific outreach activities to make biological and ecological topics more accessible and attractive to a wider audience.
